For your safety

The compact stand-alone solution.

Small but power-packed: tailor-made fire detection of the highest standard.

The SecuriFire 1000 fire detection system provides effective peace of mind against unsettling risks. It detects fires already in their incipient stages and, immediately, raises the alarm for the people in the building and the emergency services.

SecuriFire 1000 provides a cost-optimised state-of-the-art system that is always up to the task, no matter how tough the conditions. The unique principle of software redundancy ensures that the fire alarm control panel is capable of raising the alarm at all times and under all conditions. SecuriFire 1000 constantly self-tests its functionality, signalling any faults immediately.

SecuriFire 1000 adapts perfectly to every building and every safety requirement. It is ideally suited to small and medium-sized premises such as hotels, restaurants, guest houses, shopping malls and leisure centres, retirement homes, and all kinds of other facilities. The system is compatible with existing and future generations of detectors. The solutions implemented as a result are utterly convincing, both economically and from a safety viewpoint.

A rapid response – thanks to precise detection and simple operation.

At the core of SecuriFire 1000 is its control unit: this is where the SecuriLine eXtended (addressable loop) with its detectors and alarming devices is connected. The instant a fire detector senses danger, it sends a signal to the control unit. The control unit responds with lightning speed and, if necessary, immediately sends an alarm signal to the emergency services – triggering the alarm on site at the same time.

SecuriFire 1000 is simple to program using a standard computer. The practical SecuriFire Studio programming

tool guides you through the process step by step to achieve a solution that perfectly matches your individual fire detection system. And of course you can always rely on the assistance of Securiton's own fire detection specialists. The control unit is so simple to operate that you are certain to gain those crucial seconds in an emergency. The unit is operated using function keys and the innovative SecuriWheel rotating wheel. The SecuriWheel lets you navigate your way through the menu on the clearly structured colour display, intuitively and in a user-friendly way. All the system states are displayed in plain text.

- 1 Fire Incident Controls, Alarm Transmission
- 2 External Device Bus
- 3 SecuriLan
- 4 SecuriLine eXtended

SecuriFire 1000 – making sure you benefit from peak performances:

- Addressable loop up to 3500 m in length with a maximum of 250 elements
- Fully redundant software design for permanent availability
- Interface for connection to the fire services
- Simple and intuitive operation using the SecuriWheel
- Simple planning and programming
- Tested and approved in accordance with EN 54, DIN, VDE, and many others
- VdS device and system approval, CPR approval
